## Printing process

### Digital Printing- Full-colour (CMYK)

We use an ink jet-based method of printing colorants onto fabric. The ink is transferred to the fabric in a printing process called heat press that bonds the colorants with the fiber.

**1pcs-249pcs:** we can only print smaller designs printing on a desktop basis by hand. (abbreviated as DTG, which stands for (Direct to Garment).

**1pcs-249pcs:** we can print larger designs onto large format rolls of textile by machine. Full edge-to-edge printing is applicable. Please consult us for a quote.

Artwork files need to be either vector file formats (AI, .EPS, PDFs) or 300dpi jpg files.

**Wash instructions:** Hand wash.

### Screen Printing - 1 to 2 colours, Pantone®

We prefer vector files for your final artwork, when applicable. All texts in the artwork need to be outlined.

Acceptable vector file formats are Adobe Illustrator .AI, .EPS, PDFs.

No more than 2 colours at quantities offered.

Your design must utilise solid Pantone® colours.

For extra colour per side, the extra plate cost is \$40USD.

**Wash Instructions:** Because the ink is printed on the surface of the substrate, we recommend hand wash in cold water only. Do not scrub the surface of the bag where there is ink on.
